

Peter Martin, Deputy Director Water Resources - Santa Rosa Water

Region 1 Board Member Candidate Form Submission addendum

Bio and experience

I am currently the Deputy Director of Water Resources for Santa Rosa Water. In this role I oversee a division of 21 staff that administer programs related to water resources including drinking water quality, energy and water use efficiency, sustainability, water and recycled water supply planning, and water and wastewater demand management. I obtained a bachelor's degree in environmental studies from CSU Monterey Bay with an emphasis in watershed systems.

Over my 19+ years in water career I have worked for the State Water Resources Control Board, the City of San Diego, Calaveras County Water District, and for the past five years, the City of Santa Rosa. At each of these organizations I have had a role that allowed me to participate in the development of numerous water quality and water supply management initiatives. I have represented my organizations in a board or advisory capacity on various regional water supply issues, public power purchase agreements, agricultural and urban water supply contract coordination, and the development and implementation of sustainable groundwater management act plans. Through this experience, I have been very lucky to have been given the opportunity to work on diverse local, regional, and statewide water resource issues.
